Activity 1 – Development Environment Setup

I installed VS Code and the C/C++ extension for C programming.

I installed MSYS2 with MinGW-w64 GCC on my computer.

Initially, PowerShell showed an error saying that "gcc" was not recognized.

I checked GCC in MSYS2 and confirmed that the compiler was installed correctly.

The problem was that the MinGW-w64 GCC folder was not available in the Windows PATH.

I added "C:\msys64\ucrt64\bin" to the PATH and restarted VS Code.

After that, "gcc --version" worked and I successfully compiled and ran my Hello World program.
